Hallucination probe: code map

The Colab notebook runs the stage scripts in order. The scripts call the `lib` package. Every script also uses the core helpers (`config`, `common`, `utils`), so those links are left out of the diagrams.

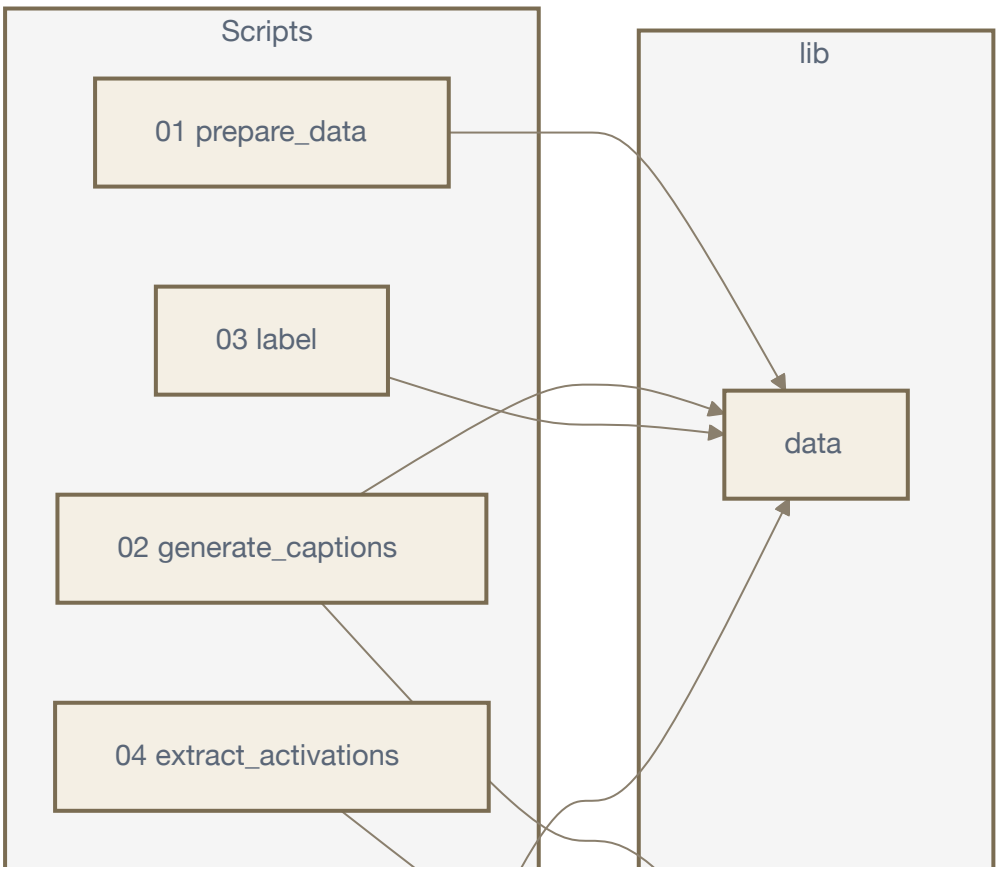

1 Run order

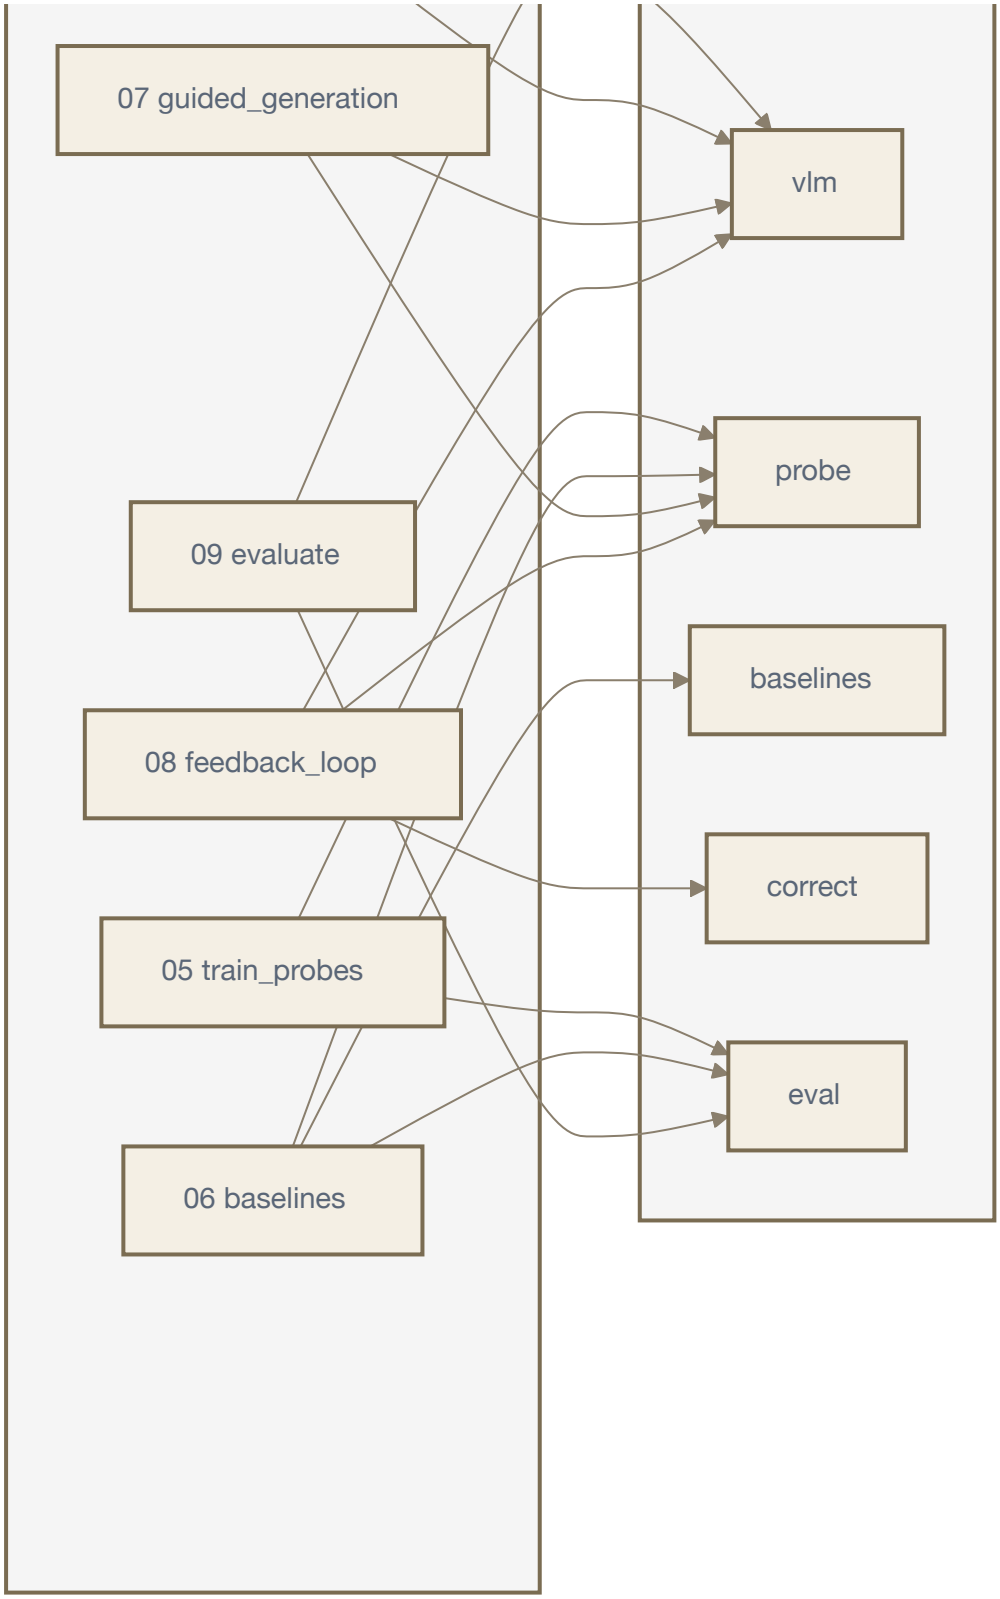

What the notebook runs, top to bottom. The GPU stages are marked.

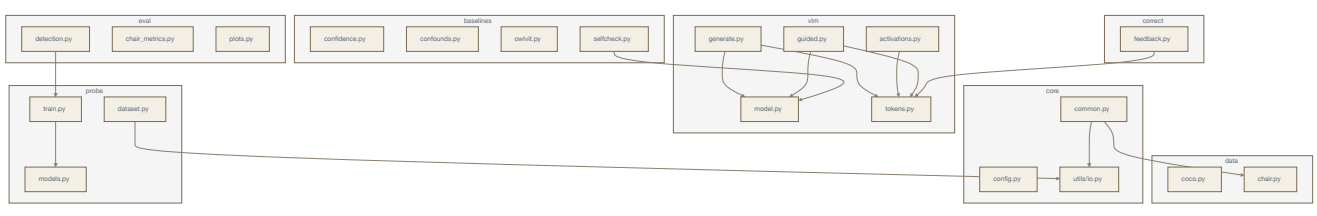

2 Which script uses which package

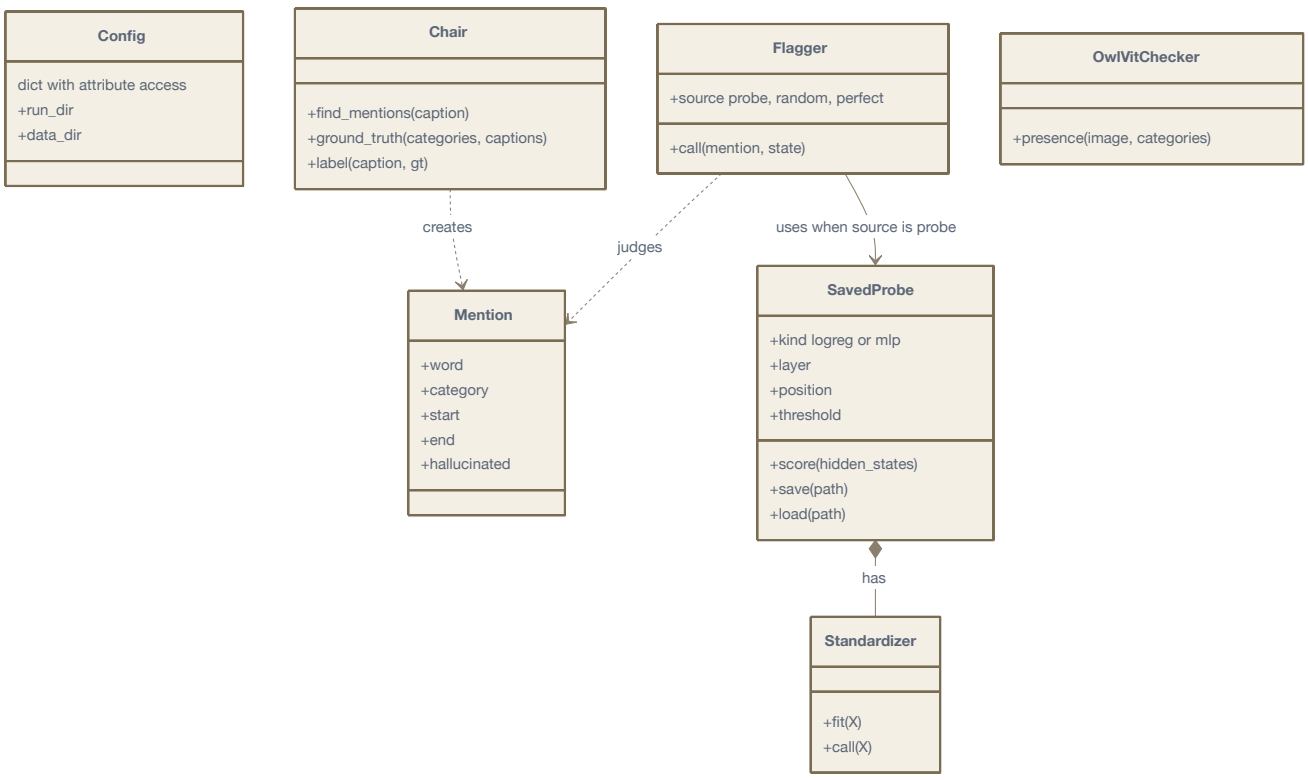

3 Modules inside the library

Each arrow means "imports from".

4 Classes

The main objects and how they relate. Most other code is plain functions.

5 Files passed between stages

Everything is saved under `MyDrive/vlm_halluc/runs/<run>/`.
